

# PCI PENETRATION TESTING BY NETWORK TEST LABS INC.

PCI Requirement – 11.3 Perform external and internal penetrations testing at least once a year and after any significant infrastructure or application upgrade or modification, including network and application upgrade or modification, including network and application-layer penetration tests.

NTL provides a detailed penetration testing service on both your internal and/or external networks on a regular basis. We offer a unique approach in identifying and validating security weaknesses throughout your diverse environment. NTL's security experts will assess your organizations' IT security posture in the same way an attacker would:

- ➔ Profile system in a stealthy, low-impact way by mimicking the evasive techniques of an actual attack.
- ➔ Exploit vulnerabilities in network systems, servers, databases, client-side systems, partner networks, and network devices.
- ➔ Identify critical OS, service and application vulnerabilities within an updated library of both open-source, in-house developed and commercial grade exploits.
- ➔ Gain root or administrator access on a compromised system through privilege escalation.
- ➔ Reveal the implications of an attack by replication an attackers attempt to access and steal or manipulate data on compromised systems.
- ➔ Provide you with a detailed final report with remediation recommendations.
- ➔ Perform a retest of the environment to ensure that all systems are patched and secured.

These prices are only valid for North American customers and are subject to change without notice.

Level	PCI Penetration Testing Service	Pricing
1	Small Business (20 Devices)	\$ 1,800 CAD
2	Medium Sized Business (50 Devices)	\$ 4,000 CAD
3	Large Sized Business (100 Devices)	\$ 7,000 CAD

Network Test Labs in partnership with SAINT is certified (#4268-01-03) by the PCI Security Standards Council as an Approved Scanning Vendor (ASV). Network Test Labs is able to help merchants manage data security risks, evaluate the security of their systems that store payment account data and assist them in achieving compliance with the PCI data security standard (DSS).

NTL customers include large gaming operators, government agencies, and financial institutions.
